

SNOW MANAGEMENT PLAN

i.PARK NORWALK

761 MAIN AVENUE

As a member of the Norwalk community, i.Park Norwalk seeks to maintain the integrity of the rivers and wildlife within its borders. It has been brought to i.Park's attention that the snow management can be improved, specifically along the Norwalk River banks. i.Park proposes the following measures to alleviate snow removal and storage during the winter months.

i.Park is instituting a new snow management contract for the property for 2021 / 2022 period:

Within 72 hours of snowfall, if needed, a truck will be used to transport all major snow piles in southern end of property and along riverbank to the northern end of the property. In this location, a designated area will be identified for snow piles. This designated area towards the rear railroad line / Kent Road will be completely within the parking lot and at least 50-ft from the river. This area will be coned off to traffic and actively maintained to mitigate melt / freezing. It should be noted that during the actual snowfall event piles will need to be created in the southern end of the property to keep up with tenant and traffic needs. However, these piles will be kept off the riverbank and will be relocated to the northern end of the property once the event is over.
