

# CONNECTICUT INVASIVE PLANT LIST

Information by the Connecticut Invasive Plants Council (see their website at [http://nbii-nin.ciesin.columbia.edu/ipane/ctcouncil/CT\\_Invasive\\_Plant\\_List.htm](http://nbii-nin.ciesin.columbia.edu/ipane/ctcouncil/CT_Invasive_Plant_List.htm) for more information.)

This is a list of species that have been determined by floristic analysis to be invasive or potentially invasive in the state of Connecticut, in accordance with PA 03-136.

The Connecticut Invasive Plants Council encourages the use of non-invasive alternatives, particularly when planting near parks, natural areas, or other minimally managed habitats.

AQUATIC & WETLAND PLANTS

* <i>Miscanthus sinensis</i> Anderss.	Eulalia		X
<i>Phalaris arundinacea</i> L.	Reed canary grass	X	
<i>Phragmites australis</i> (Cav.) Trin.	Common reed	X	
<i>Poa compressa</i> L.	Canada bluegrass		X

\* An asterisk (\*) denotes that the species, although shown by scientific evaluation to be invasive, has cultivars that have not been evaluated for invasive characteristics. Further research may determine whether or not individual cultivars are potentially invasive. Cultivars are commercially available selections of a plant species that have been bred or selected for predictable, desirable attributes of horticultural value such as form (dwarf or weeping forms), foliage (variegated or colorful leaves), or flowering attributes (enhanced flower color or size).

† A dagger (†) indicates species that are not currently known to be naturalized in Connecticut but would likely become invasive here if they are found to persist in the state without cultivation.
